

BRANDON McCRAY

SENIOR SOFTWARE ENGINEER | AI-ENABLED SYSTEMS | .NET & ANGULAR

Raleigh, NC | bradmccray89@gmail.com | 757-995-3444 | brandonmccray.com

PROFESSIONAL SUMMARY

Senior full-stack software engineer with nearly a decade of experience designing, modernizing, and owning enterprise systems across IT services, consulting, SaaS, and financial technology. Strong background in .NET, C#, Angular, SQL, cloud delivery, and AI-enabled workflow integration. Known for taking ownership of complex applications, improving unreliable or inefficient processes, translating business needs into practical technical systems, and guiding developers through implementation and troubleshooting.

CORE EXPERTISE

Application Development

C#, .NET Framework, .NET Core, ASP.NET, Angular, TypeScript, JavaScript, Next.js

Data, Integrations & AI

SQL Server, PostgreSQL, REST APIs, Outlook add-ins, LLM integrations, automated workflows

Cloud, Delivery & Leadership

Azure, AWS, CI/CD, system modernization, performance tuning, secure development, code reviews, mentoring, technical planning

PROFESSIONAL EXPERIENCE

Software Engineer | IT Services and Consulting

Dec 2025 - Present

Remote / Raleigh, NC

- Build and improve enterprise applications using Angular, .NET, C#, and SQL across front-end workflows, APIs, business logic, integrations, and data access.
- Apply AI and large language model capabilities to internal and customer-facing workflows, emphasizing practical automation, controlled usage, maintainable integrations, and reliable output.
- Analyze existing systems, development practices, and deployment processes to identify recurring failure points, unnecessary complexity, and opportunities for targeted improvement.
- Deliver focused enhancements that improve reliability, release confidence, efficiency, and user experience without forcing unnecessary platform rewrites.
- Troubleshoot application behavior, integrations, and data flow across multiple systems while coordinating technical changes with business requirements and operational constraints.
- Provide technical direction across architecture, feature design, implementation, code reviews, and problem solving while supporting other developers through complex issues.
- Partner with stakeholders to translate operational needs into scalable systems and repeatable processes rather than isolated one-off features.

Software Engineer / Lead Developer | Viewpoint Partners

2020 - Dec 2025

Raleigh, NC

- Owned ComplianceViews, a financial compliance platform supporting risk management, regulatory reporting, audit trails, and client-facing workflows.
- Transformed the application from a bundled internal add-on into a standalone revenue-generating product and helped scale adoption from approximately 300 to more than 4,000 users in under two years.
- Reduced critical page-load times from more than eight seconds to under one second through profiling, query analysis, front-end optimization, and targeted architectural improvements.
- Built and maintained the full application stack using Angular, .NET, C#, SQL Server, REST APIs, Telerik, Syncfusion, SendGrid, and Azure DevOps.
- Modernized legacy code, improved security and maintainability, and created a usable local development environment for a previously network-dependent application.
- Led code reviews, mentored junior developers, partnered with project managers on requirements and sprint planning, and provided technical ownership from discovery through release.

Software Engineer | Sharptop

2017 - 2020

Remote

- Maintained and extended AWS-hosted applications with emphasis on availability, production troubleshooting, and performance.
- Managed EC2-based application infrastructure, monitoring, scaling, and operational support.
- Contributed to service-oriented application components and internal tooling in a small cross-functional consulting team.
- Developed primarily with Groovy and Grails while supporting custom client systems and evolving business requirements.

SELECTED TECHNICAL LEADERSHIP & PROJECTS

- AI cost and token analysis tooling: Developed an NPM-based repository analysis concept that estimates guaranteed and potential AI token usage from instruction files and other high-context assets, creating a foundation for cost visibility and optimization recommendations.
- Cross-entity notes architecture: Designed a flexible data model for associating notes with multiple business entity types while supporting legacy-system references and avoiding identifier collisions across databases.
- Delivery process improvement: Investigated unstable Angular and .NET deployment workflows, recurring release failures, environment inconsistencies, and CI/CD gaps with the goal of improving reliability without forcing a disruptive rebuild.

EDUCATION, CERTIFICATION & MILITARY SERVICE

B.S. Computer Science	Liberty University 2019
Microsoft Azure Fundamentals	Microsoft Certified
U.S. Navy - Electronics Technician	2011 - 2015 Radar, communications, technical diagnostics, and team leadership in high-pressure operational environments
